

Making A Smarter, Safer & Healthier World

Smart and Safe Locker Systems

Mechanical lockers have been a constant in the Educational environment for decades; their functionality has never changed, although the environment around them has changed drastically. As we change the way that we teach and the way that we learn, we are finally starting to change the way we interact with the storage space in our buildings. Student use of mechanical lockers has been steadily declining for the past 30 years. Lockers are still a necessity in our school buildings, but if we do not adapt to the new needs of our students, we will see the use of them continue to decline for the next 30 years. Smart and Safe Locker Systems offer students the convenience they need to make the locker systems a benefit to our students instead of becoming a nuisance between classes. Smart and Safe Locker Systems also bring many benefits to Administration by giving access control back to the school with global one button control, and all the reporting functionality that you expect from a system that we utilize in today's environment.

ACCESS

Access via ID card, key fob or optional cell phone.

FLEXIBILITY

Students can access a different locker at different times, increasing overall locker use and reducing the amount they carry into class.

FREE UP SPACE

Lockers are practically never 100% occupied, with this system you can reduce the total number of lockers in the building.

FAST ACCESS

No more fumbling with combination locks between period and causing delays.

LOCKDOWN

With one touch, administration can lockdown all lockers in case of an emergency or threat.

CONTROL

Administration can set who has access and when they have access.

GLOBAL UNLOCK

With one touch, administration can unlock all lockers for locker search.

REPORTING

Administration will learn which lockers are used the most, which areas of the building are accessed the least and everything in between.
